The V2 layered implementation is on GitHub.

Pull request

https://github.com/ARCWorksPH/ARCWorks-Restaurant-Suite/pull/10

- Branch: ui/landing-page-design-2-grok-v2
- Base: ui/landing-page-design-2-handoff-v2 (not main)
- Status: open, visual review required, do not merge yet

What landed

Layer	Implementation
Background	Desktop + mobile atmosphere (gold star / cyan nebula)
Atmosphere	CSS gold/cyan glows + grain (`pointer-events: none`)
Chef Doy's	Transparent gold wordmark (dominant)
ARCWorks	Transparent product mark (top-right)
Glass card	Separate glass body, edge highlight, shine + real form controls
CSS	New `landing-design2.css`
Work log	`docs/UI/GROK_LANDING_V2_WORK_LOG.md`

All Identity / session / lockout / return-URL behavior is unchanged.

One remaining step (binary assets)

The optimized PNGs/WebP were prepared from the assets you supplied, but the connector cannot push binary blobs cleanly. The markup already points at:

- /images/branding/chef-doys-wordmark.png
- /images/branding/arcworks-mark.png

- /images/branding/landing-bg-desktop.png (+ .webp)
- /images/branding/landing-bg-mobile.png

Please add those four files to the branch (from the chat attachments or the local optimized set), then capture the required viewport screenshots under docs/UI/evidence/grok-landing-v2/. After that the page should match the Design 2 composition far more closely than the first pass.
